PROFESSIONAL SUMMARY

Aspiring Full-Stack AI Engineer & Python Developer pursuing B.Tech in Information Technology (CGPA: 8.3/10, expected May 2027). Hands-on experience developing Generative AI applications, RAG pipelines, LLM agent workflows, and RESTful microservices using Python, Flask, FastAPI, React, SQL, and Docker. Skilled in prompt engineering, embeddings, vector databases, and automated CI/CD workflows. Demonstrated problem solver with 200+ DSA challenges solved across competitive coding platforms.

EDUCATION

Vignan's Foundation for Science, Technology and Research *Guntur, AP, India*
Bachelor of Technology in Information Technology (CGPA: 8.3 / 10.0) Jul 2023 - May 2027
Relevant Coursework: Data Structures & Algorithms, OOP, DBMS (SQL), Operating Systems, Networks, AI, ML, Web Tech.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), SQL, Java, C, HTML5/CSS3
AI & Generative ML: LLM Integration, RAG Pipelines, Prompt Engineering, Embeddings, Vector Databases, LangChain, Scikit-learn
Backend & Web Stack: Python (Flask, FastAPI), RESTful APIs, JSON Processing, Authentication, Microservices, React.js, Next.js
Databases & DevOps: PostgreSQL, Supabase (pgvector), MySQL, Git / GitHub, GitHub Actions, Docker, Linux, Postman, CI/CD Workflow

KEY PROJECTS

AI Chatbot Using Large Language Model (LLM) | *Python, Flask, OpenAI API, REST APIs, JSON, Docker*
- Developed a scalable AI-powered chatbot backend using Flask and OpenAI LLM APIs to generate dynamic, contextual responses.
- Architected modular REST API endpoints for prompt processing, JSON payload validation, and context window management.
- Optimized prompt engineering workflows and integrated automated error handling routines to improve response quality.

RAG-based Knowledge Assistant | *Python, LangChain, Supabase pgvector / ChromaDB, Embeddings, FastAPI*
- Engineered a Retrieval-Augmented Generation (RAG) system ingesting unstructured text documents for semantic search retrieval.
- Implemented document chunking, embedding generation, and vector store queries to deliver accurate, source-grounded answers.
- Leveraged LangChain and prompt chaining protocols to evaluate retrieval precision and eliminate hallucination risks.

Full-Stack Student Management System | *Python, Flask, React, SQL, REST APIs, Docker*
- Built a full-stack web application featuring a modular React frontend and Flask RESTful backend microservices.
- Designed relational SQL database schemas for structured student record storage, CRUD operations, and fast query execution.
- Integrated frontend UI components with backend API endpoints, deploying containerized services with Docker.

Spam Email Classification System | *Python, Flask, Scikit-learn, NLP, Pandas, NumPy*
- Developed an ML-based email classification system achieving 92% evaluation accuracy on structured spam datasets.
- Implemented NLP preprocessing, TF-IDF feature extraction, and Scikit-learn model training workflows.
- Deployed prediction microservices via Flask REST APIs for real-time email text classification and analysis.

EXPERIENCE

Python Developer Intern Oct 2024 - Nov 2024
CodeAlpha | *Remote*
- Developed automated Python scripts to streamline data processing workflows and internal software tasks.
- Executed debugging, unit testing, and code optimization routines to improve software execution reliability.
- Collaborated using Git version control, maintaining clean branching strategies and peer code reviews.

CERTIFICATIONS & ACHIEVEMENTS

- Certifications: Artificial Intelligence (Accenture), Machine Learning (Simplilearn), Python Intern (CodeAlpha), Cisco Networking.
- Competitive Problem Solving: Solved 200+ Data Structures & Algorithms problems across LeetCode, HackerRank, and GeeksforGeeks.
- Leadership & Activities: Student Coordinator for Mahotsav Cultural Fest 2024 (managed 300+ participants); active hackathon builder.
